

## RETRIEVING THE USB STICKS

Sometimes getting the USB sticks out of the Q330S may be a little difficult, especially if this is the first time you have done this and are not sure of how to pull/twist/turn things. While these Q330S's may be old, they have always been like this.

I promise that it is possible, **WITHOUT** resorting to plyers or a pry bar. I include these pictures to show it is possible, since I opened them yesterday to take the pictures.

START:

REMOVE BUMPER (yes it will ultimately come off)

USING THE HANDLE (try not to use plyers to turn the handle – it will break and be a real problem to ultimatelt open) OPEN THE USB COMPARTMENT.
